

IMPORTANT NOTES TO USER

A RECENT version (7.6.6 or 7.7) of Quicktime Player is necessary to view this presentation (do not use Quicktime version 10 as it does NOT provide a controller). This application can be downloaded for FREE from the website <http://www.apple.com/downloads/>.

The documents ‘**Introduction to Nematodes Slide Supplement.pdf**’ and ‘**Section INDEX-1.pdf**’ should be PRINTED OUT for reference during the presentation.

The file size of the Quicktime presentation is **1.05 GB**. It is STRONGLY suggested that the file be copied to your hard disc (not your desktop) prior to viewing. This will provide for much smoother transitions and improved video quality.

When first “launched, ” you should go to the VIEW menu of Quicktime and drag down to the “Fit To Screen” option. This will provide a controller that allows, via the elapsed time meter (lower left) or the slide selector (lower right) **for random access to any slide or section of the presentation**. The presentation is set for MANUAL ADVANCE. Press the space bar or the “enter key” to proceed to the next slide. NOTE: You **MUST WAIT** until you see a “Play, ►” icon in the bottom center cluster of icons before proceeding to the next slide.

The duration of the presentation in Quicktime Movie (version 7.6.6) format is 18 minutes and 45 seconds of straight running time. However, to deliver/view the entire presentation with associated information contained in the syllabus will probably require at least **2 hours**.
